SUMMARY

- Future engineer with hands-on experience in Python, SQL, and computer vision, currently building a production-grade automated railway track inspection system at DFCCIL. Skilled in data cleaning, exploratory analysis, and translating messy real-world data into actionable insights. Seeking full-time or internship roles in data analytics or data engineering.

EXPERIENCE

- **DFCCIL (Dedicated Freight Corridor Corporation of India Ltd.)**
Data & Technology Intern *May 2025 – Present*
 - Engineered an automated railway track inspection pipeline using drone video and a Roboflow instance segmentation model, reducing manual inspection effort.
 - Designed a multi-class rail classifier in Python that distinguishes normal track, parallel tracks, junctions/switches, and drone-drift scenarios from detected rail polygons.
 - Improved sleeper fault detection accuracy by implementing perspective-aware assignment via `cv2.fitLine`, evaluating each rail's exact X-position at every sleeper's Y-coordinate.
 - Automated per-frame CSV reporting covering rail gap metrics, sleeper spacing, missing sleeper counts, and frame-level anomaly labels (junction, drift, two-track, normal).

EDUCATION

- **Jaypee Institute of Information Technology** Noida, India
B.Tech in Information Technology *Jul 2024 – Jun 2028 (Expected)*

PROJECTS

- **Cafe Sales Data Cleaning & Analysis (Python, Pandas, Matplotlib)**: Cleaned and standardized a real-world sales dataset: resolved missing values, fixed data types, and enforced business logic constraints. Produced revenue visualizations and trend summaries that surfaced top-performing products and peak sales periods.
- **Truly Indian (HTML, CSS, JavaScript, Node.js, Render)**: Designed and deployed a full-stack travel discovery platform enabling users to explore and contribute information on local destinations across India, featuring user authentication, account management, and a community-driven place-submission system with a responsive front-end interface.

SKILLS

- **Languages**: Python, SQL, C/C++, PHP
- **Libraries**: Pandas, NumPy, Matplotlib
- **CV / ML**: OpenCV, Roboflow, Instance Segmentation, YOLOv11
- **Web**: HTML, CSS
- **Tools**: Git, MySQL, GitHub

CERTIFICATIONS

- **CS50P: Introduction to Programming with Python**: Harvard University, 2024
- **Pandas**: Kaggle, 2026
